

Glycerol V, UCO-based

Product description

Glycerol is produced as co-product in the production of biodiesel. Biodiesel is generally produced from rapeseed oil, but sunflower and soya oil can be used as well. In this case, Used Cooking Oil (UCO) is used. The raw oil is refined and then converted into biodiesel and glycerol through a process of esterification. The glycerol content amounts to around 10% and is used e.g. in the production of biogas.

Terms of delivery

- tank transport
- price per tonne
- delivered under the general terms of delivery; www.agribiosource.nl/leveringsvoorwaarden

Product specification

	Content per kg dm		Content per kg dm
Crude protein	1 g	Organic matter	900 g
Glycerol	800 g	Phosphorus (P)	1,3 g
Methanol	5 g	Nitrogen (N)	0,2 g
Oil	1 g	Potassium	40,4 g
Crude fibre	6 g	Chloride	0,3 g
MONG	50 g	Sodium	1,4 g
Starch	0 g	Dry matter	850 g
Sugar	0 g	Origin	Animal
Ash	100 g	pH	4,0
